

HUNGRY HUNGRY HIPPOS

Hungry Hungry Hippos is a project designed to have a highly exciting meme flair with an incredibly safe, secure, and profitable plan for the long term. The team from Hungry Hungry Hippos is experienced, well known, and KYCed - but at the inception, intends to remain anonymous. We believe this will increase intrigue, speculation, and excitement. This project is adopting a new approach to raise funds before launch, as well as, and to the function of the project in general. The deeply connected team has found an exceptional opportunity to single-stake Ethereum in liquidity pools earning a significant rate of annual return.

The Hungry Hungry Hippos team believes that with the London Fork and upcoming events in the Ethereum blockchain, Ethereum holds one of the most promising futures of all cryptocurrencies. Hungry Hungry Hippos will utilize 80% of all LP collected and convert to Ethereum. Rather than pairing with HHH tokens and increasing the trading liquidity, only 10% of all funds raised will be dedicated to HHH liquidity, creating a fast moving and highly tradable token with low tax 3% (in & out) that ALL goes to True Burns, which should produce significant amount of volume and interest. 80% of all collected private sale / presale funds will instead be locked in the Ethereum liquidity pool made available to the team, with a projected rate of return of minimum 50% APR.

The lock time is 1 year to receive these rates, and at this time, due to the sensitive nature of the opportunity, the LP partner will not be disclosed. This pool has been in operation for multiple years with proven returns, and is made available by an industry leader.

At the end of the 1 year time period, this jackpot of ETH will be repaid at a target rate of 1.5x initial input in ETH. To give simple calculations, given a 1000 BNB capital raise, 800 BNB will be immediately converted to Ethereum and sent to staking.

Given a rate of BNB = \$285 and ETH = \$1650, this means that 800 BNB will be converted into 138 ETH. Each week the Jackpot total amount will be updated to reflect weekly compounding interest, and will be reported in total ETH and total USD value per HHH token held.

These calculations are suggestions, not financial advice, but consider a simple **Case Example:**

A Seed Investor contributes 10 BNB (\$2850) at seed sale. The project converts 80% of seed sale to ETH (1.38 ETH). The staking pool yields the projected 50% APR as ETH rises to a value of \$5,000 by September, 2023. During the burn process, token supply decreases by 20% over the course of the year, leaving the initial buyer with a 20% greater market-share. This results in a near 600% return, resulting in a "Jackpot" Payout of over \$15k for the seed sale buyer at \$2850.

None of this considers the potential for profit by swing trading, and on gains on investments in the token itself. While there is no promise of gain or profit in any investment written or implied, the intention of HHH is to ensure an exceptionally solid floor value that encourages continued trading / buying in dips, and profit opportunities in upswings. Our goal is to provide seed investors with a minimum 150% return of Ethereum tokens at the end of the game.

**KYC - Audit - Renounced - 1 Year LP Lock - Low Tax 3% in & out / ALL BURN
Low Gas / Easy Trading No CEX / No Trash Marketing / No Empty Promises**
